

TRITON Income Bond Developed Countries Mutual Fund

Monthly Summary Report: 31 March 2024

Summary Risk Indicator

The risk indicator is based on the assumption that you will hold the product for the recommended period of 5 years.

Investment Objective

The Fund's investment objective is to provide the unit holder with income and capital growth, by investing mainly in euro-denominated bonds of developed economies, in liquidity products, and to a lesser extent (no more than 10% of its assets) in shares. The Fund is actively managed and its purpose is to provide investors with long-term capital growth.

Investment Strategy

The fund mainly invests in fixed interest securities in euro, issued by EU country-members, organizations, financial institutions and corporations. The fund seeks to maximize total return and is not tethered to any benchmark. The investment team is focused on fundamental analysis to generate investment ideas, but also monitors the short-term movements of the market and conduct ongoing review of portfolio performance and risk characteristics.

Performance fee

Up to 15% on any positive difference between the performance of the NAV per unit and the performance of the index.

From 01/01/2022 the performance fee will be calculated and paid, if an outperformance has been achieved relative to the benchmark even in periods of negative returns, while it will not be calculated or paid if it underperforms relative to the benchmark, even in periods when the return on the Fund is positive

The performance fee is calculated in accordance with ESMA's guidelines on performance fees in UCITS and certain types of AIFs (34-39-992) as they have been applied and incorporated into the supervisory framework of the Hellenic Capital Market Commission from 1/1/2022.

Q1 Commentary

During the 1st quarter of 2024, inflation continued to moderate globally. The Fed, the ECB and the Bank of England all kept rates on hold. Markets watched inflation data closely as many major central banks stated that the rate cuts needed greater confidence in its downward trajectory. Global activity data showed signs of improvement. US remained an outperformer, while activity in Europe revealed signs of bottoming out. After a strong performance in Q4 2023, rates markets experienced a rise in yields. Towards the middle of March, 10Y UST yields rose by 50bps at 4.32%. Both Bunds and gilts followed a similar trajectory to USTs. 10Y German bond yield at the end of quarter was at 2.4%. BoJ raised interest rates for the first time since 2007, exiting its Negative Interest Rate Policy (NIRP), ending the Yield Curve Control. Credit spreads continued to tighten in Q1, in line with the trend from Q4 2023. Spreads tightened more in high yield credit than investment grade in both USD and EUR credit. TRITON Income Fund outperformed the market, posting a positive return of 1.05% against a negative performance of 0.33% of its reference benchmark, BLP Euro Aggregate Index.

Key risks

The Mutual Fund is subject to Investment risks and Other associated risks from the techniques and securities it uses to achieve its objective. The table on the right explains how these risks relate to each other and the Outcomes to the Unitholder that could affect an investment in the Mutual Fund.

Investors should also read Risk Descriptions in the Prospectus for a full description of each risk.

Investment risks

Risks from the Sub-Fund's techniques and securities

Interest Rate	Market	Credit	Derivatives (Leverage)
By investing the majority of its holdings in bonds and fixed-income assets, the fund is exposed to interest rate risk, defined as the risk of decreased returns and loss of capital as a result of interest rate increases.	The fund is subject to normal market fluctuations and the risks associated with investing in securities markets. The value of your investment and the income from it may be affected by general economic and political factors as well as industry or company specific factors.	An important part of the investment is held in debt securities, which are characterized by strong asymmetry of returns. They combine the probability of small return from the interest rate fluctuation with the probability of loss much of the investment due to inability to meet obligations of the issuer.	The derivatives market introduces significant levels of complexity, increasing the probability of adverse gains or losses to the fund that holds derivatives. The higher sensitivity to price movements of the underlying asset can asymmetrically affect the price of a derivative that is linked to it.
