

TRITON Global Equity International Mutual Fund

Quarterly Summary Report: **30 June 2025**

Summary Risk Indicator

Lower Risk Higher Risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator is based on the assumption that you will hold the product for the recommended period of 5 years.

Investment Objective

The Fund investment objective is to provide the unit holder with capital growth, by investing mainly in large-cap companies in both developed and emerging markets. The Fund is actively managed relative to the Benchmark and its purpose is to provide investors with long-term capital growth.

Investment Strategy

The Fund invests mainly in large-cap companies in both developed and emerging markets which in the Management Company's view present attractive valuations or opportunities to increase profits or market shares in the sectors in which they operate. The Fund may also acquire equity securities through certificates of deposit (ADRs, GDRs). The Fund's investment policy does not follow specific geographical or sectoral restrictions. The selection of these stocks is based on a variety of criteria regarding the fundamentals of the selected company, the earnings growth prospects, the quality and effectiveness of management teams and market valuation.

Performance fee

Up to 15% on any positive difference between the performance of the NAV per unit and the performance of the Dow Jones Global Index index. From 01/01/2022 the performance fee will be calculated and paid, if an outperformance has been achieved relative to the benchmark even in periods of negative returns, while it will not be calculated or paid if it underperforms relative to the benchmark, even in periods when the return on the Fund is positive. The performance fee is calculated in accordance with ESMA's guidelines on performance fees in UCITS and certain types of AIFs (34-39-992) as they have been applied and incorporated into the supervisory framework of the Hellenic Capital Market Commission from

Q2 Commentary

Investors quickly re-risked in Q2. After a major roundtrip in sentiment around "liberation day" risk appetite was back to almost bullish levels during the second quarter. The policy uncertainty and weak soft economic data were the drivers of aggressive risk-off moves in early April. But, the tailwinds from fiscal policy in Germany, the "Big Beautiful Bill" in the US, the expectations for more Fed cuts as well as the resilient of some hard economic data as the labor market, drove a strong recovery. Yet after the tariff pause, US equities saw their largest one-day gain of 9.52% for the S&P500 on Apr 9, since November 2009. Since early April, US equities were underperforming the RoW, but started to outperform from May, led by the "Magnificent 7", due to renewed AI optimism and looming banks deregulation. US small cap stocks also rallied in May. June saw more range-bound behavior for US equities until a month-end squeeze higher. At the regional level, DM equities marginally outperformed EM equities – by c1.0% in USD terms. All the key regions posted gains in Q2, led by eurozone equities. Globally, 10 out of 11 sectors posted gains, with technology faring best and healthcare bearing most of the brunt. Meanwhile, cyclicals outperformed defensives both in the US and in other developed markets. Even though US equities continue to dominate in global equity portfolios, for the second half we support international equity and style diversification to manage concentration risk, even though we expect US equities equally perform since corporate profitability holds up and the weaker greenback should be a major underestimated boon to US earnings. Fears for the second half of the year is a negative growth shock, a large rate shock on long duration bonds and a deepening dollar bear market which weighs on global multi-asset portfolios. We would expect markets to shift from being narrative to more data-driven. Fund posted a negative return of 2.48% versus -4.06% for the benchmark index the most attributed to currency effects.

Key risks

The Mutual Fund is subject to Investment risks and Other associated risks from the techniques and securities it uses to achieve its objective. The table on the right explains how these risks relate to each other and the Outcomes to the Unitholder that could affect an investment in the Mutual Fund.

Investors should also read Risk Descriptions in the Prospectus for a full description of each risk.

Investment risks

Risks from the Sub-Fund's techniques and securities

Market	Credit	Derivatives (Leverage)	Currency
The fund is subject to normal market fluctuations and the risks associated with investing in securities markets. The value of your investment and the income from it may be affected by general economic and political factors as well as industry or company specific factors.	Exchange rate fluctuations may negatively impact the value of investments designated in another currency. Adverse movements in currency exchange rates could result in a decrease in return and a loss of capital. It may not be possible to successfully hedge against the currency risk exposure in all circumstances.	The derivatives market introduces significant levels of complexity, increasing the probability of adverse gains or losses to the fund that holds derivatives. The higher sensitivity to price movements of the underlying asset can asymmetrically affect the price of a derivative that is linked to it.	Exchange rate fluctuations may negatively impact the value of investments designated in another currency. Adverse movements in currency exchange rates could result in a decrease in return and a loss of capital. It may not be possible to successfully hedge against the currency risk exposure in all circumstances.
