

HSBC Global Investment Funds - Global Equity Climate Change

Share Class EC

As at 30 September 2017

Investment Aim

The Fund invests for long-term returns in the shares of companies that are positioned to benefit from efforts to adapt to climate change. Such companies should be aiming to be market leaders in their fields. The Fund can invest in companies that are listed in any country, both developed and developing. There aren't restrictions on the market values (also known as market capitalisation) of the companies held in the Fund. The Fund may also invest in financial derivative instruments. These are financial instruments whose value is based on underlying assets, for example bonds, stocks, currencies. The derivatives the Fund can use include currency derivatives and futures, among others. The Fund uses derivatives to protect against financial risks (hedging) and to manage cash flows. Financial derivative instruments may also be embedded in other instruments used by the Fund.

Risk Disclosure

It is important to remember that the value of investments can go down as well as up and you may not get back the amount originally invested. Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up. Investments in emerging markets are by their nature higher risk and potentially more volatile than those inherent in some established markets. Stock market investments should be viewed as a medium to long term investment and should be held for at least five years. Funds with a narrow or concentrated investment strategy may experience higher risk and return fluctuations and lower liquidity than funds with a broader portfolio. For a full list of risks, please refer to the Prospectus and KIID.
